Crossing borders

Katja Mölsä
English and Swedish teacher at the Electricity and Energy Programme

Thorildsplans gymnasium
As a student:

”I’ll never be a teacher who doesn’t know enough about computers!”
As a teacher:

• Teaching future computer technicians and network technicians = a new challenge

• A wish from the students to include "computer vocabulary" in the English classes led to realising the difference in computer technology skills between me and them

• Guidelines from the Board of Education

• Invitation to course (CISCO)
CISCO Course

• Course leader: Bo Lindborg

• Appr. 10 lessons (60-90 minutes)

• Tuesdays: at the end of workday or during conference

• Lectures chapter by chapter (computer security, components, network...)

• Assembling a computer!

• Chapter tests on our own
Assembling a computer!
Results

• Greater understanding for students’ current education and future occupation

• Showing an interest in the students’ overall education = increasing their motivation to learn English

• Being able to manage and solve problems without having to ask the students...

• ...and above all: being able to bring in computer technology as a topic during English class = crossing borders!
